Guide to the Interpretation of Course Evaluations at UT Austin

The goal of course evaluation process at UT Austin is to drive teaching excellence and to support continuous improvement in teaching and learning experiences. The two sets of scales used for core evaluation questions and the associated weights are:

Strongly Agree (5)
Agree (4)
Neutral (3)
Disagree (2)
Strongly Disagree (1)

Excellent (5)
Very Good (4)
Satisfactory (3)
Unsatisfactory (2)
Very Unsatisfactory (1)

The Mean is calculated by adding all of the weights for a single question and dividing by the number of respondents. The course workload question is not averaged.

The number of students (e.g. respondents) marking each option is reported for each of the items. These frequency distributions provide information about the level of student ratings and the spread and shape of the class distribution of responses. The distributions thus provide a picture of student perception of a course.

Course evaluations provide snapshots of student perspectives on their course-level learning experiences. Most experts on teaching evaluation advise that no individual method gives the complete picture of an instructor's teaching effectiveness; multiple and diverse measures, on multiple occasions, are advised to give a full picture of the teaching effectiveness of a particular instructor. Moreover, other factors, such as size of class, level of the class, and content of the course, can cause small variations in the ratings. Therefore, student perspectives for a particular instructor or course should be interpreted as a snapshot, and not as providing complete information on the teaching effectiveness of that instructor.

Comment Questions

Identify aspects of your interactions with your teaching assistant that were most effective in helping your learning.

Comments
N/A
Very approachable. A bit difficult to understand the expectations for exams
All that I had with her were the review sessions before the tests and they were really helpful.
She helped me understand the material better during review sessions before exams. Her notes, while thorough, helped me understand the material better.
Her midterm review sessions are detailed and rigorous. Her presentation of the maths solidified my understanding of all the important concepts.
NA
Hearing familiar concepts explained a different way helped my understanding.
The midterm reviews were very effective and helpful.
She was kind and helpful, honestly no complaints at all.
She was always available to help during office hours and made time if you could not go to them. Her review sessions were also really helpful.
The review sessions were extremely informative.
Knew the concepts, good at math.
The review sessions for the exams were helpful.
Maria was always present for her zoom office hours. She showed us that there were different ways to work problems.
kind person

What is one thing the teaching assistant could do differently to help improve future students' learning in this course?

Comments
N/A
Being more clear about expectations
Maybe a study guide separate from the practice tests. Those are always helpful.
Not much to say except keep up the good work.
NA

na
I didn't interact with her enough to comment.
na
N.A.
Perhaps too good at math for her own good. Seemed to try to shoehorn many topics into mathematical equations/derivations. Some stuff is just easier to understand intuitively, especially if we're only required to know qualities about the stuff and not quantities.
I think being more on the same page with the professor would be helpful when it comes to course expectations and as well as providing your own review instead of just going over the practice exams.
I think if Maria did the IS-LM and AS-AD problems the same way we did them in class, there would have been less confusion.
